

SafeBeez Whitepaper

What is SAFEBEEZ?

SafeBeez is a community-driven token on the Binance Smart Chain. It is a fork of Safemoon and is the first-ever cryptocurrency dedicated to saving and conserving the bee populations on our planet.

5% of every transaction automatically goes to holders, 5% goes to the liquidity pool.

Static Rewards are a new and innovative solution to many issues. Firstly, rewards are directly correlated to the amount of trading volume at any given time. This type of system allows for a better, fairer, and more all-around balanced experience for holders.

Oftentimes farms have unsustainable APYs that end up only rewarding the earliest buyers, those who buy later often have to deal with an impossible amount of sell pressure. Static rewards prevent this from happening.

Also, the reflection aspect of the mechanics works as an incentive to holders, since the number of earnings depends on the overall percentage of total tokens held.

Automatic Liquidity Pool (LP)

This function takes 5% of every BEEZ transaction, automatically adds it to the liquidity pool & burns it. This helps in creating a solid, every-increasing price floor. BEEZ increases its liquidity and is rendered more scarce with every transaction.

This system is arbitrage-resistant, is able to capture trading volume with BEEZ and use it to reward holders' wallets and build up liquidity for the ecosystem.

This guarantees that the liquidity pool continues to increase while at the same time helping deter bots & swing traders.

Users can provide liquidity and stake their BEEZ to earn HnyCmb (governance token). There is a 2% fee to stake your BEEZ and a 2% fee to un-stake your BEEZ, half of these fees goes to a wallet dedicated to helping save bees and half will be used for HnyCmb buy-backs!

With a dedicated and honest team comprised of like-minded individuals whose intentions are aligned, we have come together to utilize each of our specific skill-sets to create positive change in the world.

What better way to do this than by making money for investors while at the same time making money to be donated on saving bees?

At #SAFEBEEZ we are not trying to compete with others, we believe in abundance and we want everybody to eat, including the bees!

We respect & admire those who paved the road before us, who brought ideas to life that have proved to help the world so much.

Now, let's save some bees.
